AI assistants can now prepare a QuiqSim eSIM order for a traveller

Barcelona, 27 October 2026. From today, an AI assistant can find a QuiqSim plan for a traveller and prepare the order. The interface is open, over OpenAPI and MCP, and described for assistants at quiqsim.com/llms.txt.

With a one time code, the traveller confirms where the eSIM is delivered, then pays through a secure link, directly or from the WhatsApp chat. The assistant never handles card details.

QuiqSim is the company's travel eSIM service: a traveller chooses the eSIM in a WhatsApp chat, pays through a secure link and installs it from the same chat.

About Seldon Solutions

Seldon Solutions S.L. is an AI technology company based in Barcelona. It builds engines that answer, act and finish the job, and it runs them itself. Its products are Kalimba, the restaurant platform; QuiqSim, for travel eSIMs; Cambialeón, for electricity and gas, with SwitchAPI for energy companies; and Conomium, the same engines built for other businesses.
